

Hellas CG&B

A diversified construction company with a nation-wide presence, Hellas Construction was recognized in 2021 by INC. magazine on the list of fastest growing companies and on the list of best-led companies.

Sports complexes and more.

Hellas is known for their sports stadium and sports surfaces specialty, but they also take on a range of construction projects requiring a diverse fleet of trucks and heavy equipment which they maintain from locations across the USA.

The Issues:

The Issues:

Justin Moreno was hired as the Fleet Manager for the Hellas CG&B Las Vegas operation - about 100 assets of trucks and heavy equipment. He found that they had a paper system, for equipment inspections and preventative maintenance, but that there was little enforced use of the process and limited accountability on the part of the operators. Without a regular, standardized inspection process, Justin saw that:

- Lack of regular inspection could lead to small issues becoming catastrophic breakdowns
- It was difficult to create accountability on the part of operators for the care of the equipment
- It was hard to maintain a regular, effective preventative maintenance process that could save on repair costs

The Solution:

The Solution:

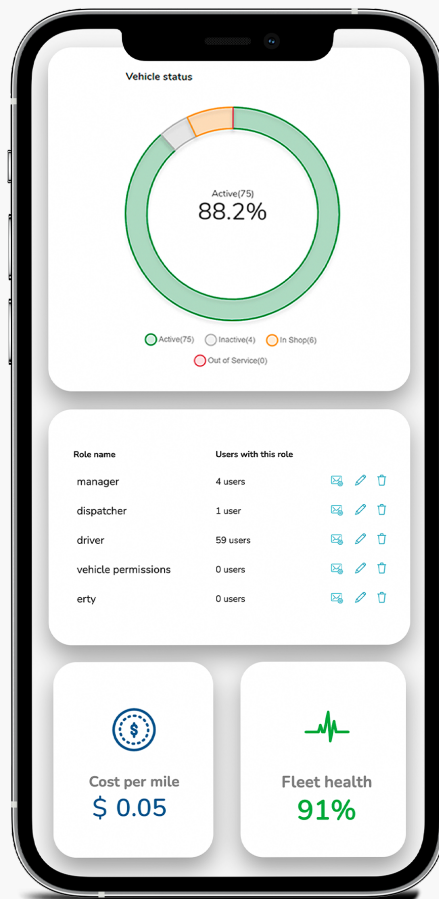

Justin implemented Driveroo mobile inspections for pre and post operation of equipment to get rid of the paper system and ensure that the inspections were taking place. Inspection time was reduced to a couple minutes.

Justin's team collected critical data on the equipment and operating hours to be able to implement an automated preventative maintenance system that alerted maintenance staff when to execute preventative maintenance on the equipment

Maintenance was able to gather more complete data and pictures with inspections that allowed the team to prioritize and plan maintenance on the equipment by need and severity - and to rate issue severity consistently across operators and sites.

Driveroo automated the generation of work orders and the ability to easily specify what needed to be done through the mobile interface, as well as capture completion of issues to create a service history of the asset.

Hellas CG&B Implemented standardized incident and safety reporting on operator mobile devices to collect all the required data - guiding operators through each step - to file reports with the head office

The Benefits:

Standardized process for inspections and incident reporting with complete information

Improve execution of preventative maintenance leading to fewer breakdowns or unnecessary repairs

Faster, easier and more consistent adherence than paper

Improve response with instant visibility to issues and alerts for the most critical items

Saved time - cut down back and forth data gathering and telephone calls.

Operators now more accountable for ensuring the operation of valuable equipment within guidelines for safe operation and best practices for maintaining the life of the equipment

More effective operations for maintenance staff with the ability to understand and manage maintenance workload

Why Driveroo?

Why Driveroo?

Driveroo's unique visual inspection interface was a key feature that attracted Hellas CG&B to the solution - making it easy and simple for the operators. Justin was impressed that he could implement exact visual representations of each type of equipment.

Flexibility was key. It was easy to modify to keep the process focused and simple. In addition, the ability to add in guidance and walk the operators through incident reports was very powerful.

The Driveroo Concierge was a huge help to Justin. Hellas CG&B was impressed by the fast response to their requests and the ability to customize. Said Justin, "Driveroo is a great value, delivering the right level of capabilities at a great price."
